Standlake CE Primary School

Calculation Policy

Mathematic Mastery

At the centre of the mastery approach to the teaching of mathematics is the belief that all children have the potential to succeed. They should have access to the same curriculum content and, rather than being extended with new learning, they should deepen their conceptual understanding by tackling challenging and varied problems.

Similarly, with calculation strategies, children must not simply rote learn procedures but demonstrate their understanding of these procedures through the use of concrete materials and pictorial representations. This policy outlines the different calculation strategies that should be taught and used in Year 1 to Year 6 in line with the requirements of the 2014 Primary National Curriculum.

Mathematical Language

The 2014 National Curriculum is explicit in articulating the importance of children using the correct mathematical language as a central part of their learning (reasoning). Indeed, in certain year groups, the non-statutory guidance highlights the requirement for children to extend their language around certain concepts. It is therefore essential that teaching using the strategies outlined in this policy is accompanied by the use of appropriate and precise mathematical vocabulary. New vocabulary should be introduced in a suitable context (for example, with relevant real objects, apparatus, pictures or diagrams) and explained carefully. High expectations of the mathematical language used are essential, with teachers only accepting what is correct.

How to Use the Policy

This mathematics policy is a guide for all staff at EPA schools and has been adapted from work by the White Rose HUB. It is purposely set out as a progression of mathematical skills and year group phases but a flexible approach to teaching and learning is needed according to the cohort and individual needs. It is expected that teachers will use their professional judgement as to when consolidation of existing skills is required or if to move onto the next concept. However, the focus must always remain on breadth and depth rather than accelerating through concepts. Children should not be extended with new learning before they are ready, they should deepen their conceptual understanding by tackling challenging and varied problems.

All teachers use the scheme of work from the White Rose Maths Hub and are required to base their planning around their year groups modules and not to move onto a higher year groups scheme of work. Teachers can use any teaching resources that they wish to use and the policy does not recommend one set of resources over another, rather that, a variety of resources are used. For each of the four rules of number, different strategies are laid out, together with examples of what concrete materials can be used and how, along with suggested pictorial representations. The principle of the concrete-pictorial-abstract (CPA) approach [Do it, Twist it, Deepen it] is for children to have a true understanding of a sequence of learning.

Concrete, Pictorial, Abstract Key

Concrete, Pictorial, Abstract Key

The policy has been adapted from the White Rose Hub's policy (2021) which splits each operation into concrete, pictorial and abstract teaching methodology.

This key will aid teachers in deciding which method to use first to build on successive skills. Generally concrete methods are taught first to build confidence in methodology, then pictorial methods second and finally abstract. However, where teachers start will depend on the confidence and ability of the class to grasp abstract concepts.

Year 1

Addition

Skill: Add 1-digit numbers within 10

Year: 1

When adding numbers to 10, children can explore both aggregation and augmentation.

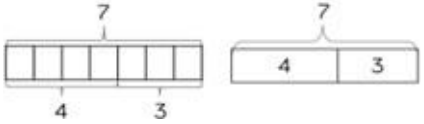
The part-whole model, discrete and continuous bar model, number shapes and ten frame support aggregation.

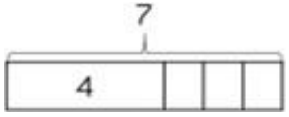
The combination bar model, ten frame, bead string and number track all support augmentation.

Pictorial Representations

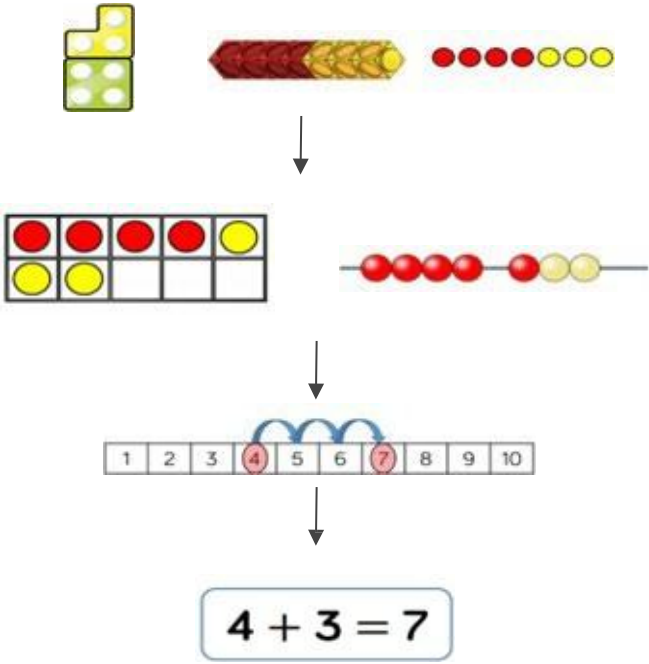
Calculation:

4 + 3 =





Methodology



Skill: Add 1 and 2-digit numbers to 20

Year: 1/2

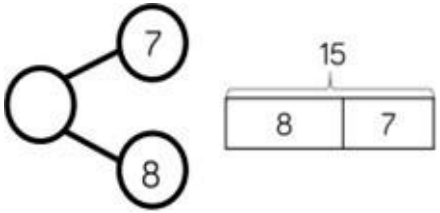
When adding one-digit numbers that cross 10, it is important to highlight the importance of ten ones equalling one ten.

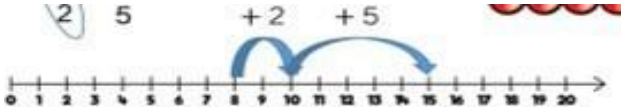
Different manipulatives can be used to represent this exchange. Use concrete resources alongside number lines to support children in understanding how to partition their jumps.

Pictorial Representations

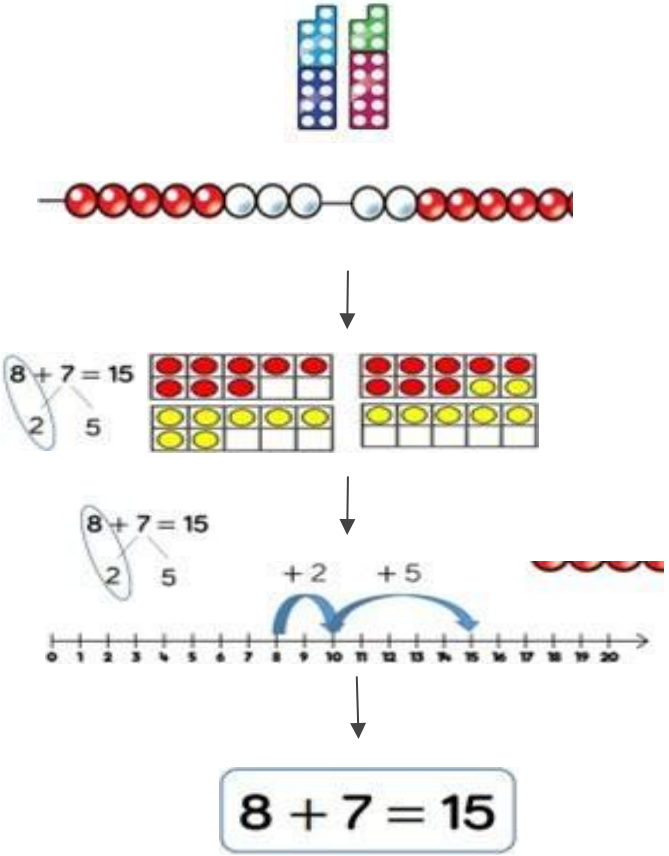
Calculation:

8 + 7 =





Methodology



Subtraction

Skill: Subtract 1-digit numbers within 10

Year: 1

Part-whole models, bar models, ten frames and number shapes support partitioning.

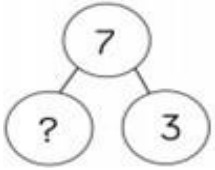
Ten frames, number tracks, single bar models and bead strings support reduction.

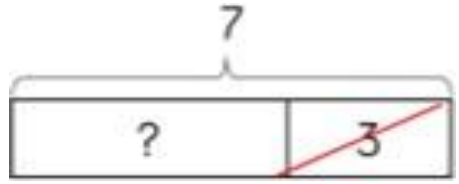
Cubes and bar models with two bars can support finding the difference.

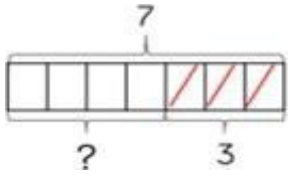
Pictorial Representations

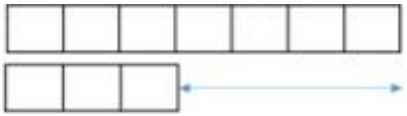
Calculation:

7 - 3 = 4

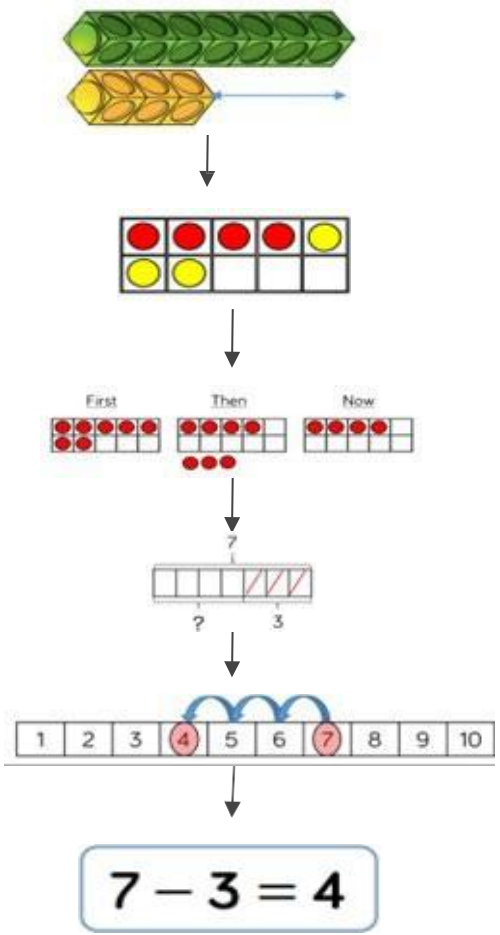








Methodology



Skill: Subtract 1 and 2-digit numbers to 20

Year: 1/2

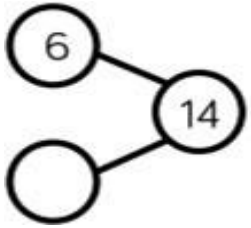
When subtracting one-digit numbers that cross 10, it is important to highlight the importance of ten ones equalling one ten.

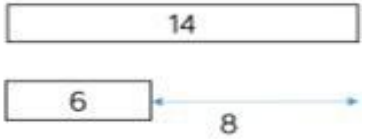
Children should be encouraged to find the number bond to 10 when partitioning the subtracted number. Ten frames, number shapes and number lines are particularly useful for this.

Pictorial Representation

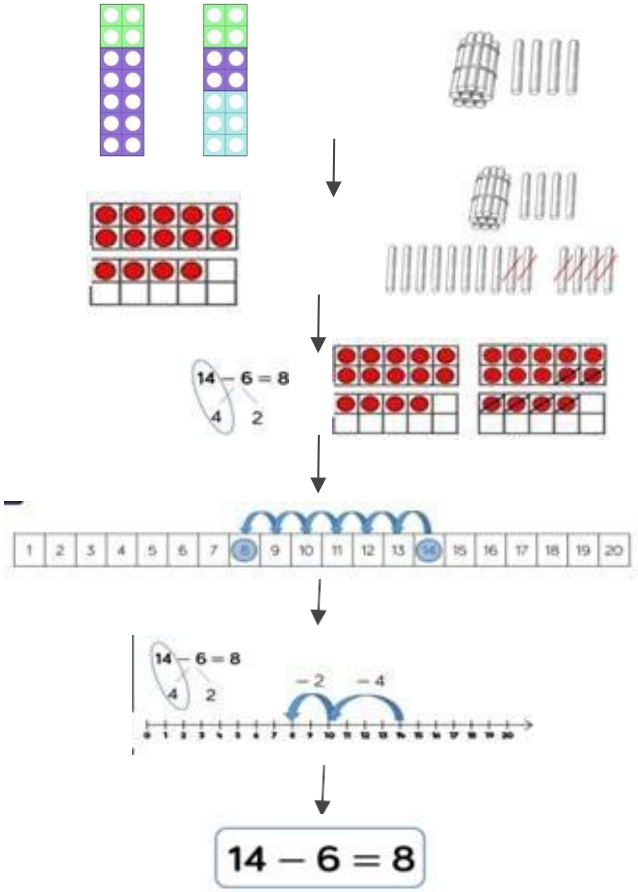
Calculation:

14 - 6 = 8





Methodology



Multiplication

Skill: Solve 1-step problems using multiplication

Year: 1/2

Children represent multiplication as repeated addition in many different ways.

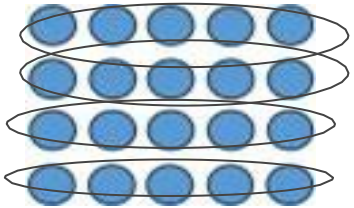
In Year 1, children use concrete and pictorial representations to solve problems. They are not expected to record multiplication formally.

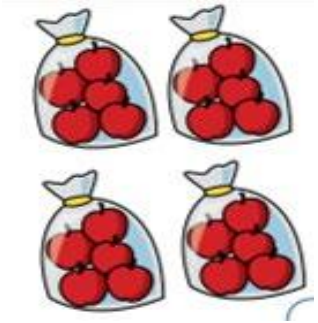
In Year 2, children are introduced to the multiplication symbol.

Pictorial Representations

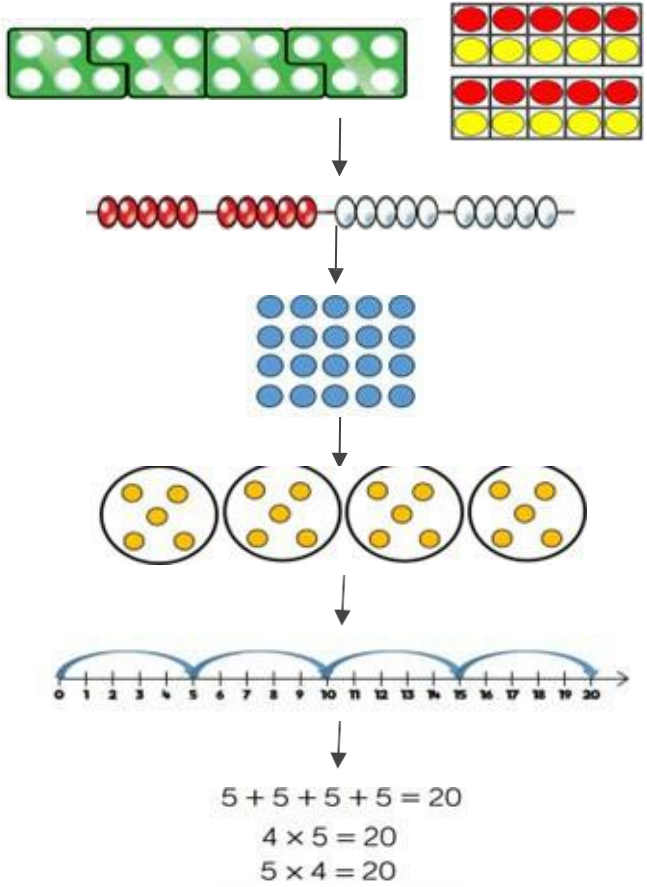
Calculation:

One bag holds 5 apples, how many apples do four bags hold?





Methodology



Division

Skill: Solve 1-step problems using multiplication (sharing)

Methodology

Year: 1/2

Children solve problems by sharing amounts into equal groups.

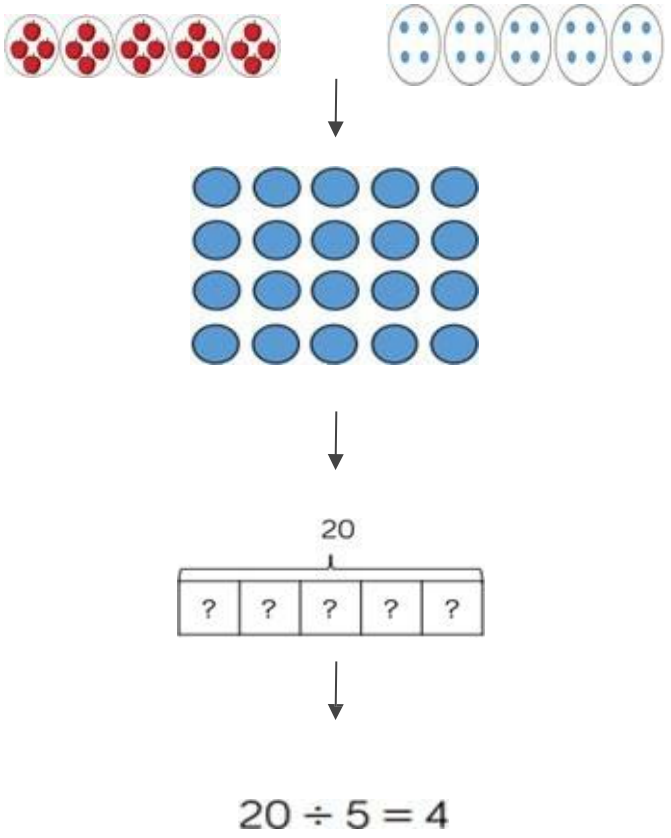
In Year 1, children use concrete and pictorial representations to solve problems. They are not expected to record division formally.

In Year 2, children are introduced to the division symbol.

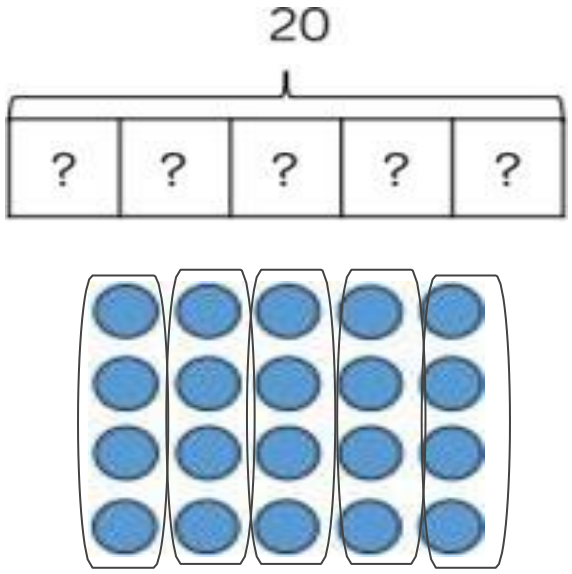
Pictorial Representations

Calculation:

There are 20 apples altogether. They are shared equally between 5 bags. How



many apples are in each bag?



Skill: Solve 1-step problems using division (grouping)

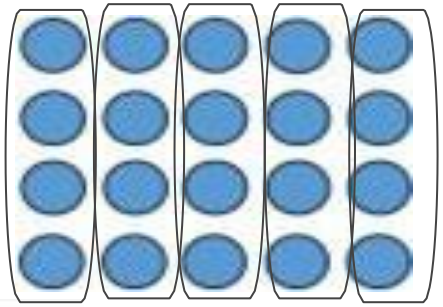
Year: 1/2

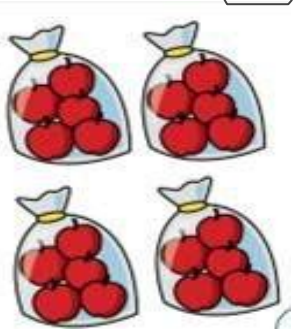
Children solve problems by grouping and counting the number of groups. Grouping encourages children to count in multiples and links to repeated subtraction on a number line. They can use concrete representations in fixed groups such as number shapes which helps to show the link between multiplication and division.

Pictorial Representations

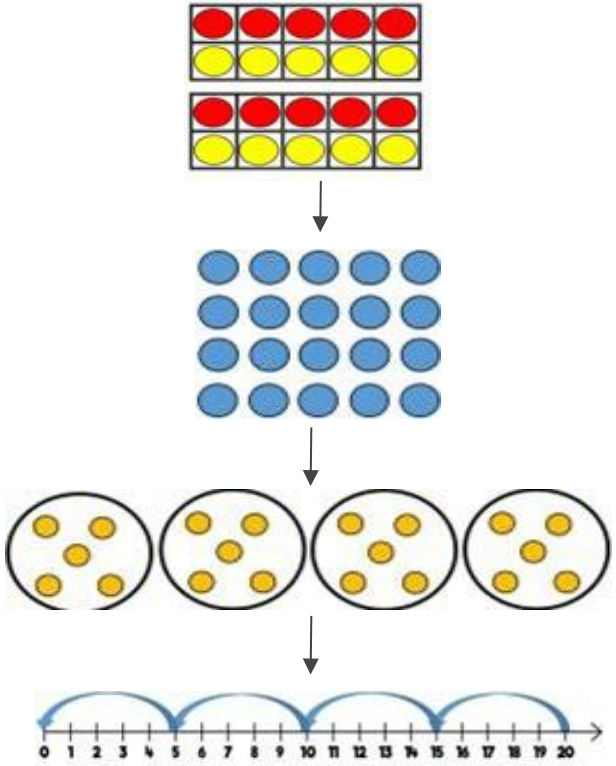
Calculation:

There are 20 apples altogether. They are put in bags 5 bags. How many bags are there?





Methodology



$20 \div 5 = 4$

YEAR 2

Addition

Skill: Add 1 and 2-digit numbers to 20

Year: 1/2

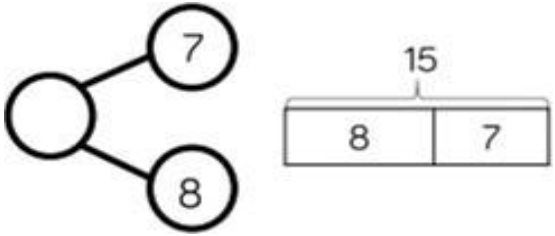
When adding one-digit numbers that cross 10, it is important to highlight the importance of ten ones equalling one ten.

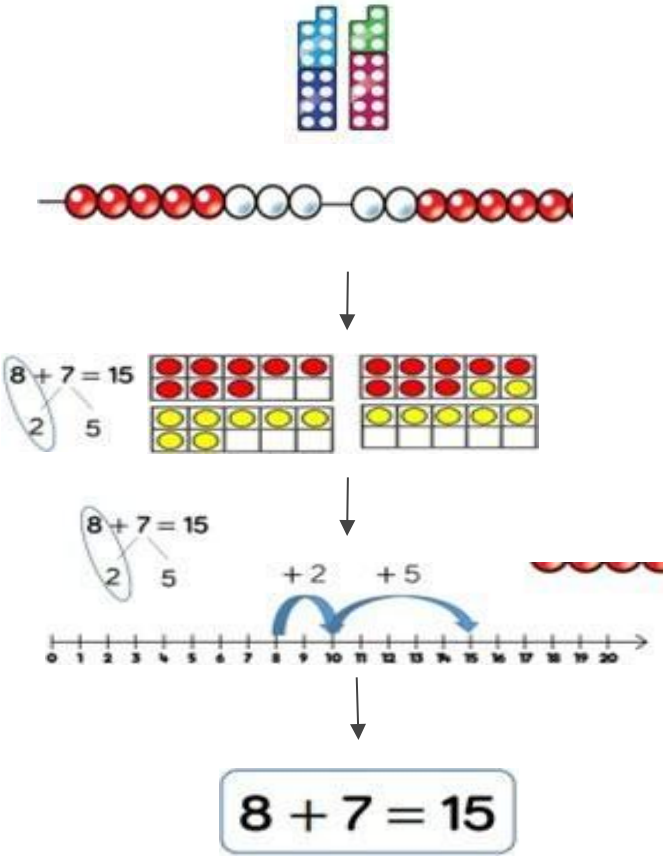
Different manipulatives can be used to represent this exchange. Use concrete resources alongside number lines to support children in understanding how to partition their jumps.

Pictorial Representations

Calculation:

8 + 7 =





Skill: Add three 1-digit numbers

Methodology

Year: 2

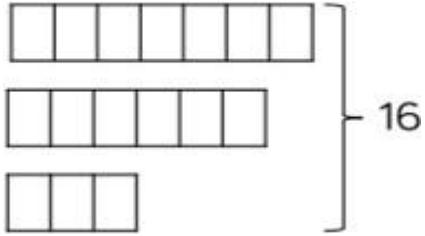
When adding three 1-digit numbers, children should be encouraged to look for number bonds to 10 or doubles to add the numbers more efficiently.

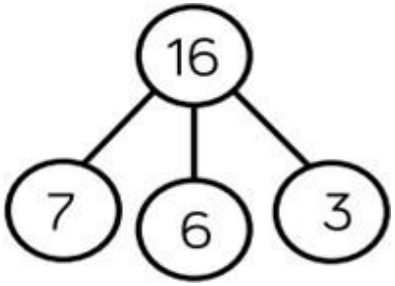
This supports children in their understanding of commutativity.

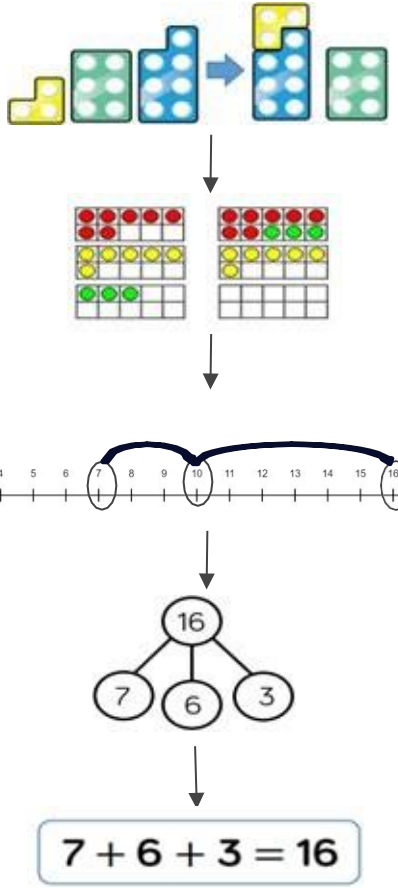
Manipulatives that highlight number bonds to 10 are effective when adding three 1-digit numbers.

Calculation:

7 + 6 + 3 =







Skill: Add 1-digit and 2-digit numbers to 100

Year: 2/3

When adding single digits to a two-digit number, children should be encouraged to count on from the larger number.

They should also apply their knowledge of number bonds to add more efficiently e.g. 8 + 5 = 13 so 38 + 5 = 43.

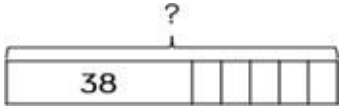
Hundred squares and straws can support children to find the number bond to 10.

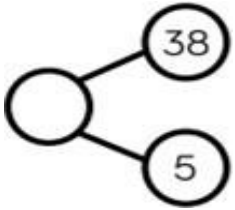
Pictorial Representations

Pictorial Representations

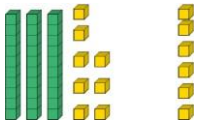
Calculation:

38 + 5 =





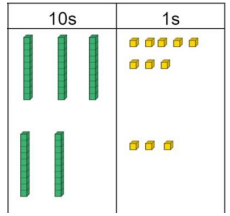
Methodology

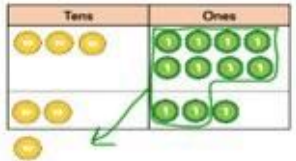


38 + 5 = 43

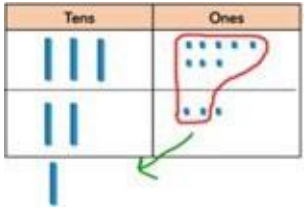
Methodology

Skill: Add two 2-digit numbers to 100	Year: 2/3
Calculation: 38 + 23 = 61	At this stage, encourage children to use the formal column method when calculating alongside straws, base 10 or place value counters. As numbers become larger, straws become less efficient. Children can also use a blank number line to count on to find the total. Encourage them to jump to multiples of 10 to become more efficient.





$$\begin{array}{r} 38 \\ +\ 23 \\ \hline 61 \\ \hline 1 \end{array}$$



$$\begin{array}{r} 38 \\ +\ 23 \\ \hline 61 \\ \hline 1 \end{array}$$

$$\begin{array}{r} 38 \\ +\ 23 \\ \hline 61 \\ \hline 1 \end{array}$$

Pictorial Representations

Multiplication

Skill: Solve 1-step problems using multiplication

Year: 1/2

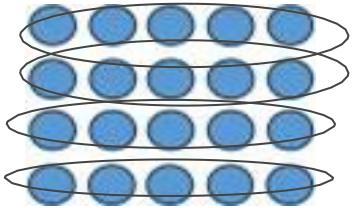
Children represent multiplication as repeated addition in many different ways.

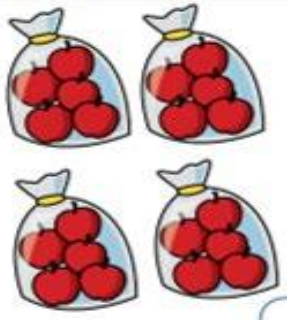
In Year 1, children use concrete and pictorial representations to solve problems. They are not expected to record multiplication formally.

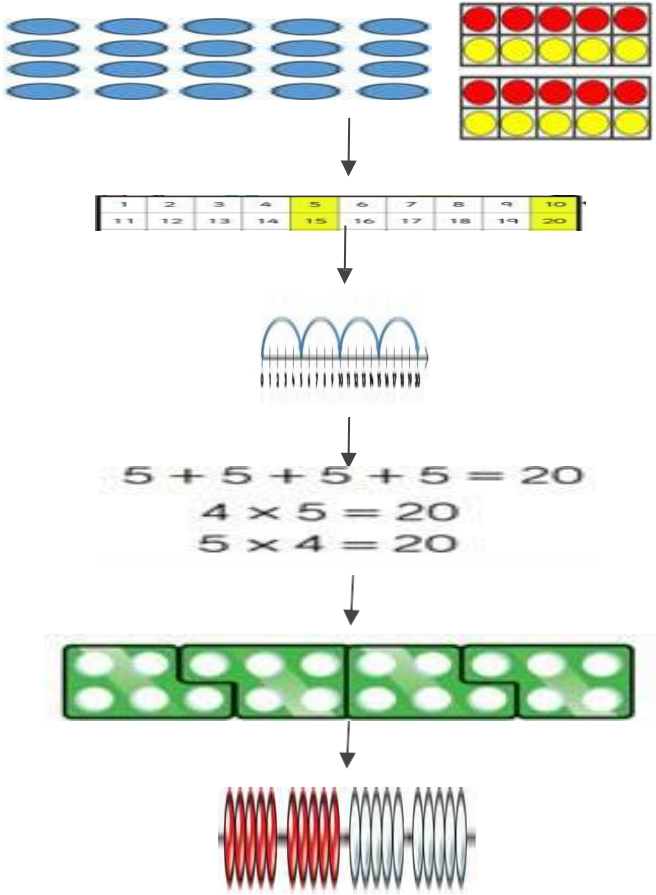
In Year 2, children are introduced to the multiplication symbol.

Calculation:

One bag holds 5 apples, how many apples do four bags hold?





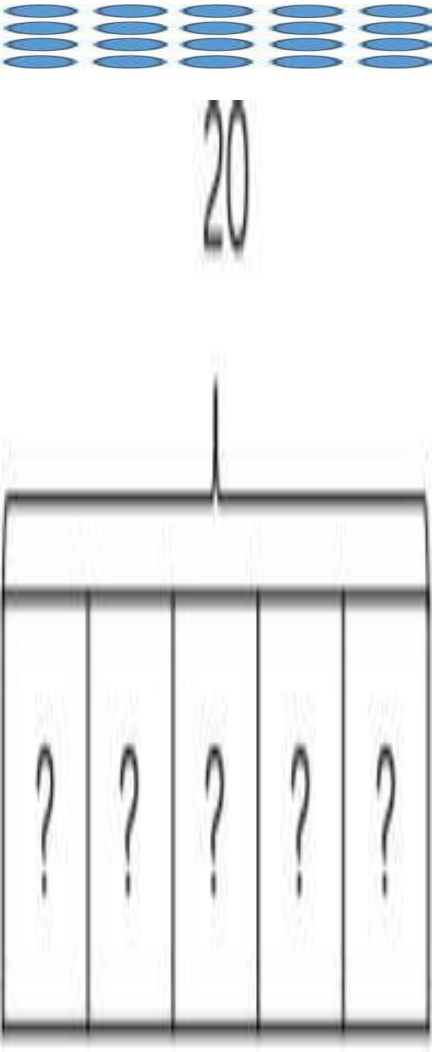


$5 + 5 + 5 + 5 = 20$

$4 \times 5 = 20$

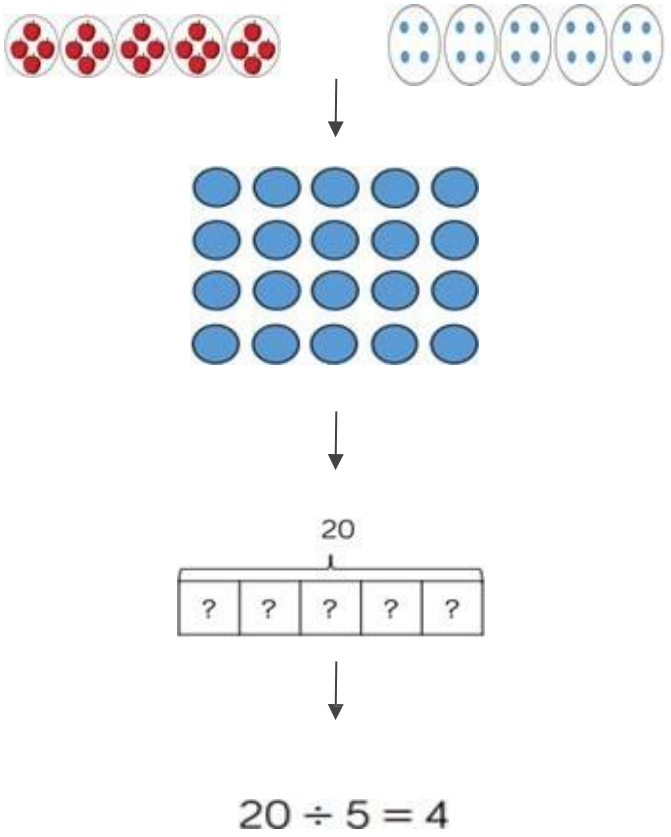
$5 \times 4 = 20$

Division



Calculation:

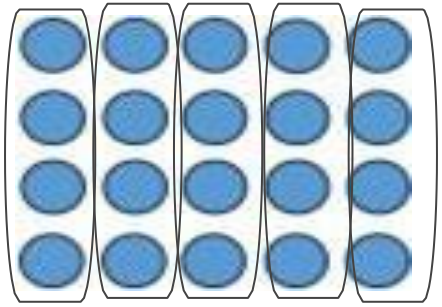
There are 20 apples altogether. They are shared equally between 5 bags. How



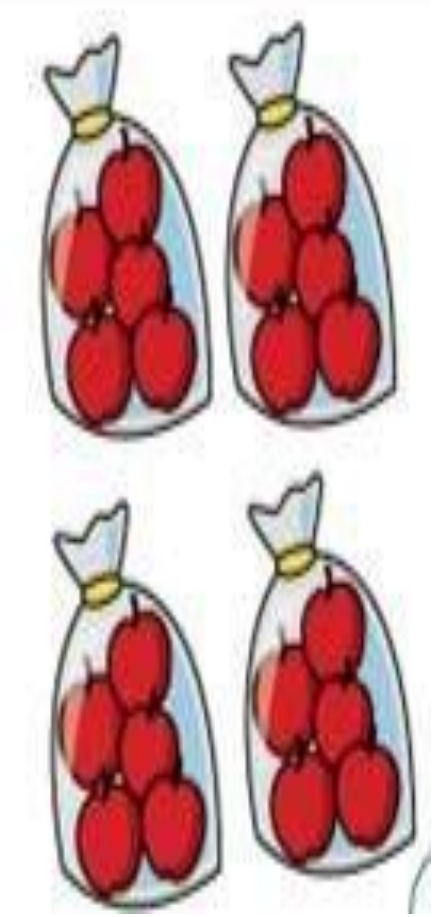
many apples are in each bag?

Year: 1/2

Children solve problems by grouping and counting the number of groups. Grouping encourages children to count in multiples and links to repeated subtraction on a number line. They can use concrete representations in fixed groups such as number shapes which helps to show the link between multiplication and division.

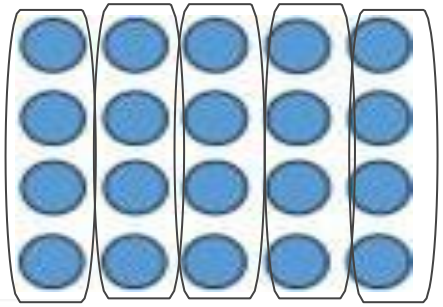


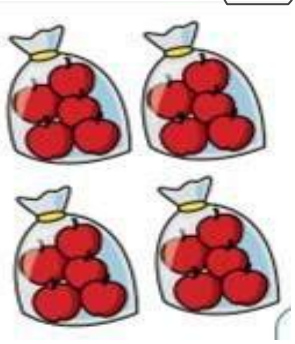
Pictorial Representations



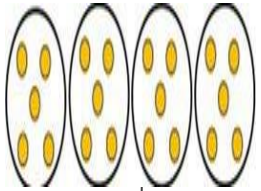
Calculation:

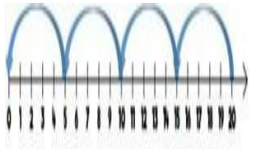
There are 20 apples altogether. They are put in bags 5 bags. How many bags are there?



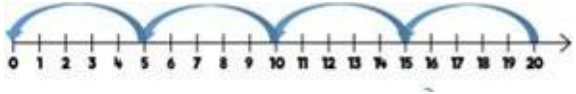


Methodology





$$20 \div 5 = 4$$



Pictorial Representations

Methodology

Skill: Divide 2-digits by 1-digit (sharing with no exchange)

Year: 1/2

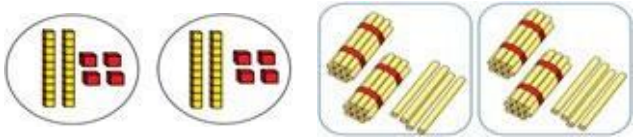
When dividing larger numbers, children can use manipulatives that allow them to partition into tens and ones.

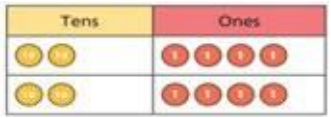
Straws, Base 10 and place value counters can all be used to share numbers into equal groups.

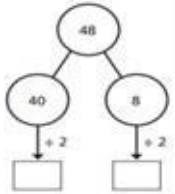
Part-whole models can provide children with a clear written method that matches the concrete representation.

divided

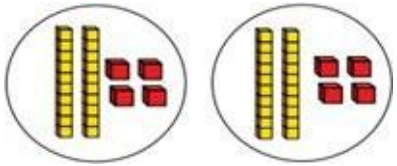
Calculation: 48 by 2 = 24

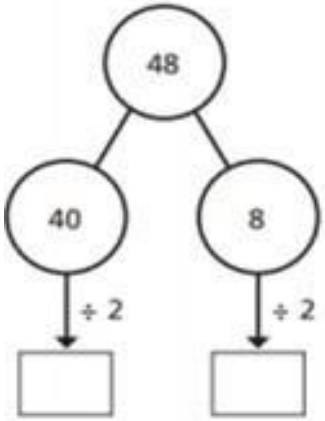






48 ÷ 2 = 24





48

(pictorial)

$$\begin{array}{r} {}^{3}\cancel{4}^{1}35 \\ -\ 273 \\ \hline 262 \end{array}$$

Multiplication

Skill: Multiply 2-digit numbers by 1-digit numbers

Year: 3/4

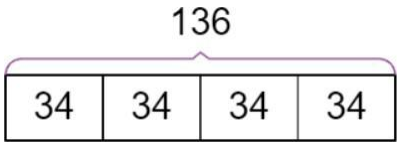
Teachers may decide to first look at the expanded column method before moving on to the short multiplication method.
The place value counters should be used to support the understanding of the method rather than supporting the multiplication, as children should use times table knowledge.

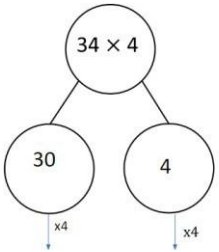
Pictorial Representations

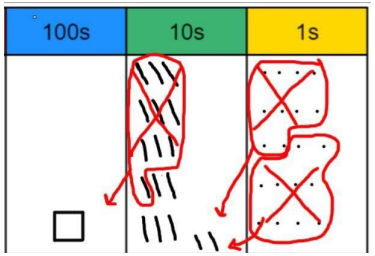
Calculation:

34 x 4 = 136

Mental Methods – Partitioning (Year 3)



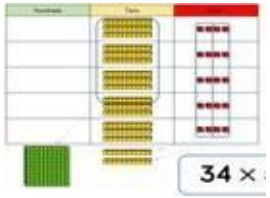


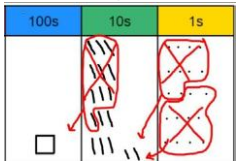


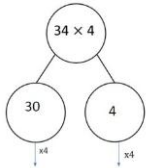
120 + 16 = 136

34 x 4 = 136

Methodology







$120 + 16 = 136$

$34 \times 4 = 136$

Division

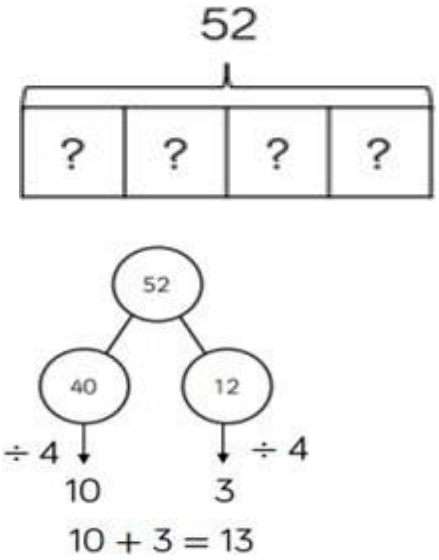
Skill: Divide 2-digits by 1-digit (sharing with exchange)

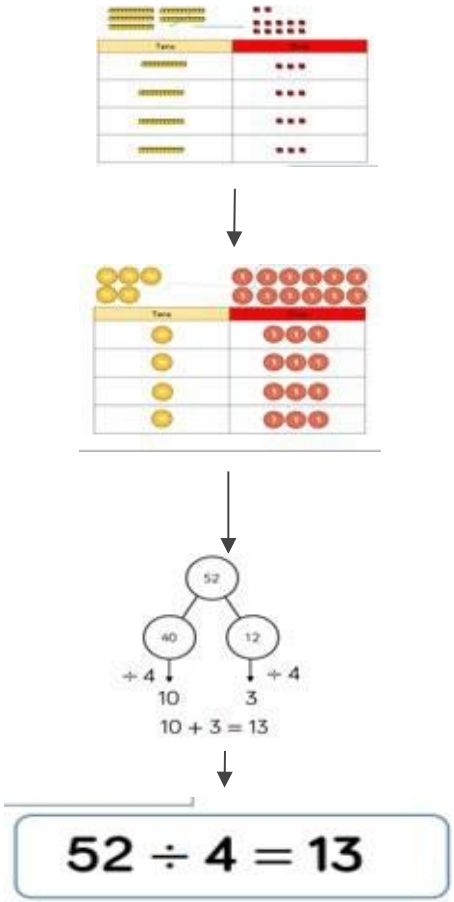
Year: 3/4

When dividing numbers involving an exchange, children can use Base 10 and place value counters to exchange one ten for ten ones.
Children should start with the equipment outside the place value grid before sharing the tens and ones equally between the rows.

Flexible partitioning in a part-whole model supports this method.

Calculation: 52 divided by 4 = 13





Skill: Divide 2-digits by 1-digit (sharing with remainders)

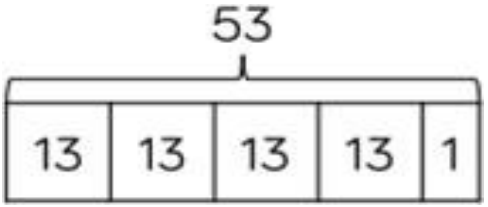
Pictorial Representations

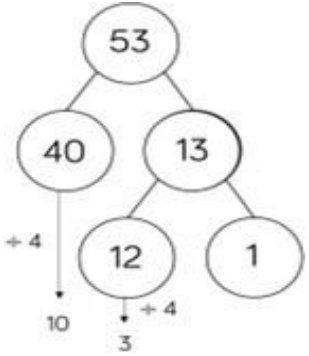
Methodology

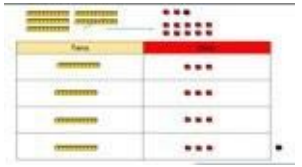
Year: 3/4

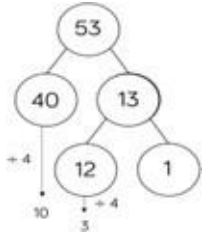
When dividing numbers with remainders, children can use Base 10 and place value counters to exchange one ten for ten ones.
Starting with the equipment outside the place value grid will highlight remainders, as they will be left outside the grid once the equal groups have been made.
Flexible partitioning in a part-whole model supports this method.

Calculation:
53 divided by 4 = 13r1









$53 \div 4 = 13\ r1$

YEAR 4

Addition

Skill: Add numbers with up to 4 digits

Year: 4

Base 10 and place value counters are the most effective manipulatives when adding numbers with up to 4 digits.

Ensure children write out their calculation alongside any concrete resources so they can see the links to the written column method.

Plain counters on a place value grid can also be used to support learning.

Calculation:

1378 +2148 = 3526

Calculation:

Skill: Divide 3-digits by 1-digit (sharing)

Year: 4

Children can continue to use place value counters to share 3-digit numbers into equal groups.
Children should start with the equipment outside the place value grid before sharing the hundreds, tens and ones equally between the rows.
This method can also help to highlight remainders.
Flexible partitioning in a part-whole model supports this method.

Pictorial Representations

844 divided by 4 = 211
(Mental Strategies)

Methodology

Skill: Divide 2-digits by 1-digit (grouping)

Year: 4/5

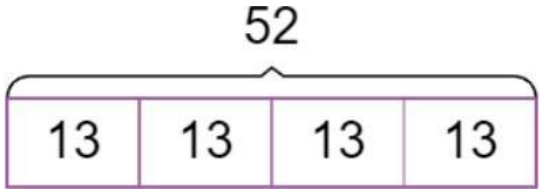
When using the short division method, children use grouping. Starting with the largest place value, they group by the divisor.

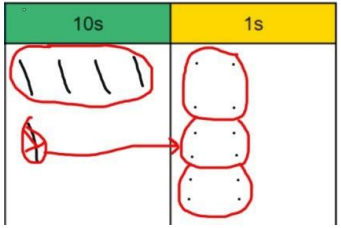
Language is important here. Children should consider 'How many groups of 4 tens can we make?' and 'How many groups of 4 ones can we make?'

Remainders can also be seen as they are left ungrouped.

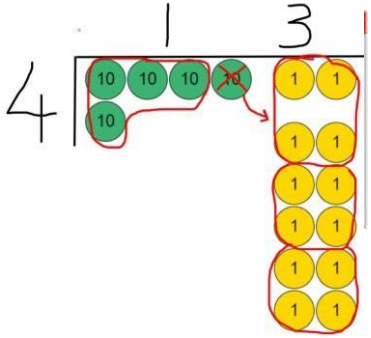
Pictorial Representations

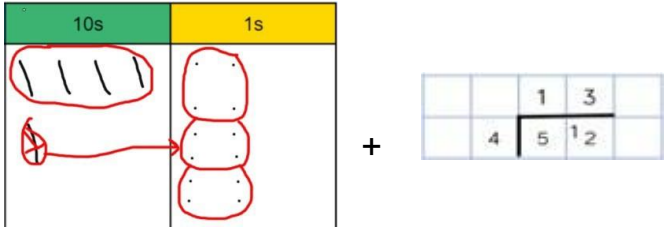
Calculation: 52 divided by 4 = 13

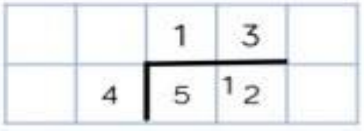




Methodology







YEAR 5

Addition

Skill: Add with up to 3 decimal places

Year: 5

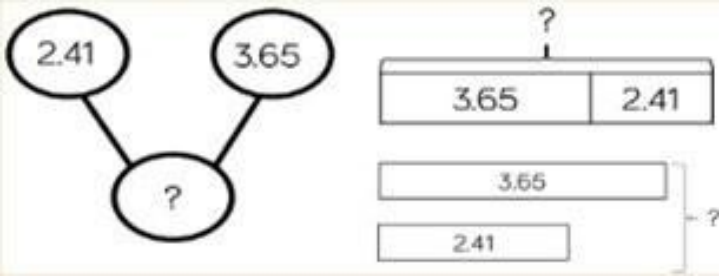
Place value counters and plain counters on a place value grid are the most effective manipulatives when adding decimals with 1, 2 and then 3 decimal places.

Ensure children have experience of adding decimals with a variety of decimal places. This includes putting this into context when adding money and other measures.

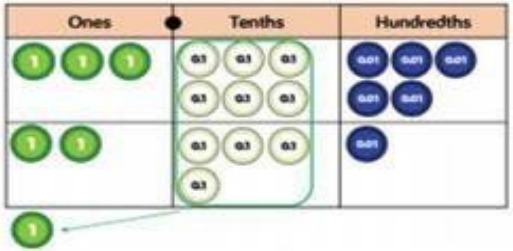
Pictorial Representations

Calculation:

3.65 +2.41 = 6.06



Methodology



$$\begin{array}{r} 3.65 \\ +\ 2.41 \\ \hline 6.06 \\ \hline 1 \end{array}$$

Skill: Add numbers with more than 4 digits

Pictorial Representations

Methodology

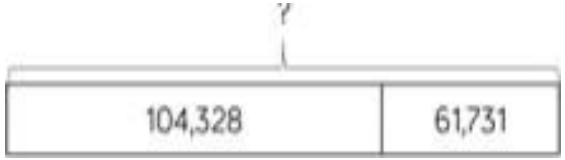
Year: 5/6

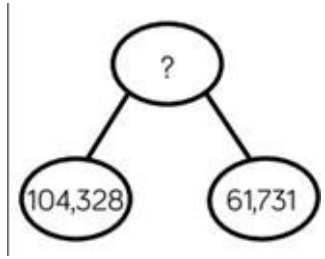
Place value counters or plain counters on a place value grid are the most effective concrete resources when adding numbers with more than 4 digits.

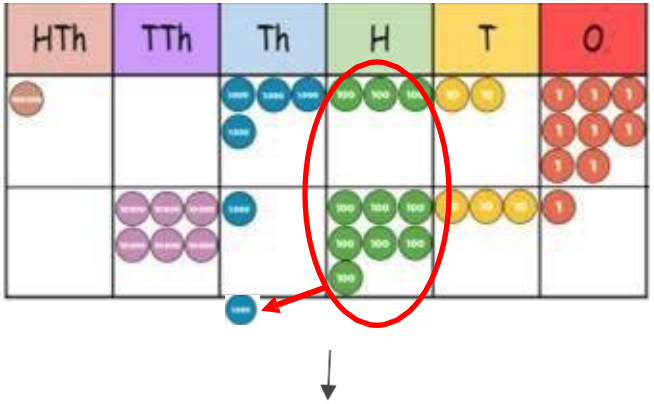
At this stage, children should be encouraged to work in the abstract, using the column method to add larger numbers efficiently.

Calculation:

104,328 +61,731 = 166,059







1	0	4	3	2	8
+	6	1	7	3	1
1	6	6	0	5	9

1

Subtraction

Skill: Subtract with up to 3 decimal places

Pictorial Representations

Methodology

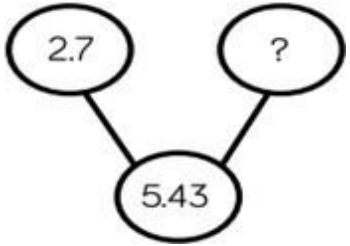
Year: 5

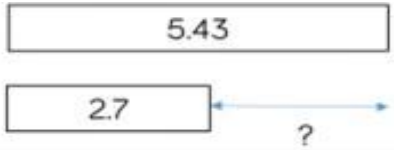
Place value counters and plain counters on a place value grid are the most effective manipulative when subtracting decimals with 1, 2 and then 3 decimal places.

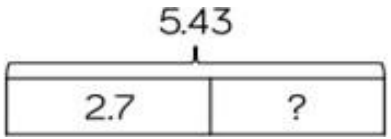
Ensure children have experience of subtracting decimals with a variety of decimal places. This includes putting this into context when subtracting money and other measures.

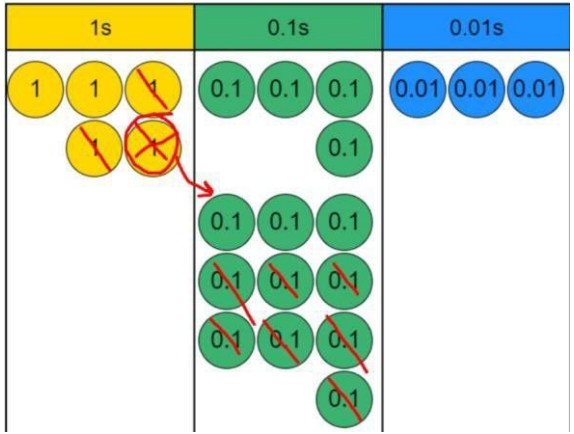
Calculation:

5.43 - 2.7 = 2.73









$$\begin{array}{r} {}^{4}\not{5}.{}^{1}43 \\ -\ 2.7 \\ \hline 2.73 \end{array}$$

Skill: Subtract numbers with more than 4 digits

Year: 5/6

Place value counters or plain counters on a place value grid are the most effective concrete resource when subtracting numbers with more than 4 digits.

At this stage, children should be encouraged to work in the abstract, using column method to subtract larger numbers efficiently.

Calculation:

294,382 - 182,501 = 11,881

	2	9	$^{3}\not{4}$	$^{1}3$	8	2
−	1	8	2	5	0	1
	1	1	1	8	8	1

Multiplication

Skill: Multiply 4-digit numbers by 1-digit numbers

Year: 5

When multiplying 4-digit numbers, place value counters are the best manipulative to use to support children in their understanding of the formal written method.
If children are multiplying larger numbers and struggling with their times tables, encourage the use of multiplication grids so children can focus on the use of the written method.

Calculation: 1,826 x 3 = 5,478

	Th	H	T	O
	1	8	2	6
×				3
	5	4	7	8
	2		1	

Skill: Multiply 2-digit numbers by 2-digit numbers

Year: 5

When multiplying a multi-digit number by 2-digits, use the area model to help children understand the size of the numbers they are using. This links to finding the area of a rectangle by finding the space covered by the Base 10.
The grid method matches the area model as an initial written method before moving on to the formal written multiplication method.

Pictorial Representations

Calculation:
22 x 31 = 682

Methodology

Skill	Year	Representationsand models	
Subtract with up to 3-digits	3	Part-whole model Bar model	Base 10 Place value counters Column addition

Subtract with up to 4-digits	4	Part-whole model Bar model	Base10 Place value counters Column addition

Subtract with more than 4 digits	5	Part-whole model Bar model	Place value counters Column addition
Subtract with up to 3 decimal places	5	Part-whole model Bar model	Place value counters Column addition

Multiplication

Skill	Year	Representations and models	
Solve one-step problems with multiplication	1/2	Bar model Number shapes Counters	Te fra Bea stri Numbe lines

Multiply 2-digit by 1- digit numbers	3/4	Place value counters Base 10	Short written method Expanded written method

Multiply 3-digit by 1- digit numbers	4	Place value counters Base 10
Multiply 4-digit by 1- digit numbers	5	Place value counters

Skill	Year	Representationsand models

Multiply 2-digit by 2- digit numbers	5	Place valuecounters Base 10	Short written method Gr method

Multiply 2-digit by 3- digit numbers	5	Place value counters  Short written

Multiply 2-digit by 4- digit numbers	5/6	Formal written method

Division

Skill	Year	Representationsand models
Solveone-step	1/2	Bar model Real life objects Arrays Counter

problems with division (sharing) Solve one-step problems with division (grouping)	1/2	Real life objects Number shapes Bead strings Ten frames	Number lines Arrays Counters

Divide 2-digits by 1-digit (no exchange sharing)	3	Straws Base 10 Bar model	Place value counters Part-whole mod
Divide 2-digits by 1-digit (sharing with	3	Straws Base 10	Place value counters Part-whole mod

Skill	Year	Representationsand models	
Divide 2-digits by 1-digit (sharing with remainders)	3/4	Straws Base 10 Bar model	Placevaluecounters Part-whole model
Divide 2-digits by 1-digit (grouping)	4/5	Placevaluecounters Counters	Place value grid Writtenshort division
Divide 3-digits by 1-digit (sharing with exchange)	4	Base 10 Bar model	Placevaluecounters Part-whole model
Divide 3-digits by 1-digit (grouping)	4/5	Placevaluecounters Counters	Place value grid Writtenshort division

Skill	Year	Representations and models	
Divide 4-digits by 1-digit (grouping)	5	Place value counters Counters	Place value grid Written short division
Divide multi-digits by 2-digits (short division)	6	Written short division	List of multiples
Divide multi-digits by 2-digits (long division)	6	Written long division	List of multiples

4 Operations Vocabulary

Glossary

Addend - **A** number to beadded to another.

Aggregation- combining twoor morequantities or measures to find a total.

Augmentation - increasingaquantity or measure by another quantity.

Commutative- numbers canbeadded inany order.

Complement - in addition, anumber and Its complement makea total e.g.300 is the complement to 700 to make1,000

Difference - the numerical differencebetween two numbers is found bycomparing thequantity ineach **Minuend** - Aquantity or number from which another issubtracted.

Partitioning- Splitting a number into itscomponent parts.

Glossary

Reduction - Subtraction as takeaway.

Subltise - Instantly recognise the number of objects in a small group without needing to count.

Subtrahend- A number to be subtracted from another.

Sum - The result of an addition.

Array - An ordered collection of counters, cubes or other item in rows and columns.

Multiplicand - In multiplication,a number to be multiplied by another.

Commutative - Numbers can be multiplied in any order.

Partitioning- Splitting a number into its component parts.

Dividend - In division, the number that is divided.

Product - The result of multiplying one number by another.

Divisor - In division, the number by which another is divided.

Quotient - The result of a division

Remainder - The amount left over after a division when the divisor is not a factor of the dividend.

Exchange - Change a number or expression for an equal value.
